

## CPR – Adaptations for COVID-19

1

Check for further danger and wear your PPE if available.

2

Check for response by gently shaking the shoulders **at arms length**, and shout loudly.

3

Check for normal breathing for no longer than 10 seconds. Do this **at arms length**. You can place your hand on the belly, below the ribs to check for movement. **DO NOT** place your face near to the casualty's mouth.

4

Call 999 and send for a defibrillator if available.

5

Unresponsive and not breathing normally? Place some material over the casualty's mouth and nose (e.g. tea towel), then give **continuous chest compressions** (see below).

6

As soon as a defibrillator arrives, switch it on and follow the instructions. This is completely safe to use even with COVID-19.

• Place one hand on the other in the centre of the chest and interlock your fingers. Keep your arms straight and position yourself vertically above the chest.

• Continuous chest compressions should be at a rate of about 2 per second and 5-6cm deep – press 'hard and fast'.
